## Design Features of TUFLIN® Plug Valves

TUFLIN® Valves incorporate a plug rotating in a Teflon®-sleeve locked in the body. The Teflon®-sleeve serves as a self-lubricating seal against leakage through ports and to the atmosphere.

TUFLIN® Valves provide tight shut-off for liquids, gases or slurries, plus corrosion resistance with the absence of product contamination. The special TUFLIN® design accommodates specified changes in temperature, high vacuum as well as rated pressures, while still maintaining complete shut off.

The low friction Teflon®sleeve surrounding the plug permits quick and easy operation. Costly lubrication and maintenance are eliminated.

The seats are not exposed to the media in either the open or closed position.

The cold flow properties of Teflon® and the tendency to expand under heat are prevented by the special design of the body interior. The sleeve is locked into the body by means of metal lips surrounding the port areas and by the shoulders at the top and bottom in the body, thus restrained from rotation and movement. The ribs provided around the ports, at the top and bottom establish a very high compression of the Teflon®-sleeve against the plug.

### Features

- No lubrication, no seizing of plug**
- Teflon®-sleeve fully retained at top, bottom and around ports**
- No maintenance cost**
- Minimized body cavities for residuals or contamination**
- Complete shut off**

## Components and Material Availability

### Available Materials for Two Way Valves:

\* Ductile Iron EN-JS1049 (0.7043, GGG 40.3),  
as per EN 1563, 0.7659 (Ni Resist) as per DIN 1694  
\* Carbon Steel EN10213-2 (1.0619, GS-C25),  
A216-WCB, A352-LCB  
Stainless Steel 1.4408, 1.4552, 1.4309 as per EN10213-4,  
CF8M, CF8C, CF8, CF3M, CF3,  
Argonit 1 (1.4361 casting), CN7M (A 20), A494-M-35-1  
(Alloy 400, Monel), A494-CZ100 (Alloy 200, Nickel),  
A494-N7M (Alloy B2), A494-CW2M (Alloy C4),  
B367-C2 (Titanium), Zirconium R60702, A494-CY-40 (Alloy 600)

Other materials upon request.

\*Available with fluorocarbon lining in PFA  
(see technical data sheet: tdb-lpv-gb).

Combinations of different materials for body and plug are  
available. Body and plug are of the same material unless  
otherwise requested.

Standard plug material is stainless steel 1.4408.

Seals and sleeves are pure Teflon® (no regenerate).  
Teflon®-fiberglass reinforced sleeves available on request.  
Other sleeve materials depending on pressure and temperature.  
Other fluorocarbon seals for special applications on request.  
All Two Way Valves are available in FIRESAFE – design acc. to  
API 607 4th edition, also with electrostatic eliminator or free of  
oil and grease.

### Available Flange Standards:

PN 10-40 (EN 1092-1)

PN 63-100 (EN 1092-1)

CLASS 150, 300, 600 (ASME B16.5)

JIS (JIS B2210)

British Standard (BS1560)

Screwed Ends: Whitworth R (DIN 2999-1)  
or NPT (ASME B1.20.1)

Welded Ends: EN12760 (SW)  
EN12627 (BW)

Temperature range: 173 K to 553 K (-100° C to +280° C)  
(more details see page 14)

Suitable for vacuum services

(Vacuum range:  $1.33 \cdot 10^3$  to  $1.33 \cdot 10^{-2}$  mbar)

Strength calculation method against internal pressure:  
The calculation procedure for pressure retaining valve  
components has been performed acc. to DIN 3840 (EN12516).

Subject to technical modifications.

## TUFLIN® Two Way Valves with Relief Port

Applicable for Two Way Valves with Flanged, Screwed or Weld Ends DN 15 - 400 / NPS ½ - 16

Two Way Valves with relief hole or slot in the plug are for products which tend to polymerize or substantial pressure builds up when in a confined state.

Effect: In closed position the interior of the plug is unidirectional open to the piping system through the relief port.

This assures the necessary pressure balance.

Mounting position: Relief port on pressure respectively product side.

Application: Hydrocyanic acid and products containing hydrocyanic acid, Chlorine, Oleum etc.

Dimensions please see page 10 and 11

Subject to technical modifications.
