

ZK 313-E/11 DN 25-80

ZK 313-D/20 DN 25-80

Control Valve with ZK Radial Stage Nozzle® and Tandem Shut-Off

ZK 313

DN 25 – DN 150

Description

Control valve ZK 313 with ZK radial stage nozzle® designed for reducing high differential pressures in industrial installations and power plants and used as:

- Injection-cooling valve
- Warm-up valve
- Drain valve
- Steam control valve
- Continuous blowdown valve
- Feedwater control valve
- Leak-off valve

All internals are exchangeable. Leakage rate A acc. to EN 12266-1.

For equipment in sizes DN25 - 80 two body types are available: straight-through and angle pattern. The body of equipment sizes DN 100 - 150 is hammer forged and of the angle or Z-type.

A sampling valve is available as optional extra on request.

Actuator and operation

The following actuators are available:

- 02: Handwheel (standard), retrofitting of an electric rotary actuator possible
- 11: Electric rotary actuator B1-F10 EN ISO 5210
- 12: Electric rotary actuator B1-F14 EN ISO 5210
- 13: Electric linear actuator
- 20: Pneumatically operated diaphragm actuator or piston actuator
- 31: Lever actuator equipped with quarter-turn actuator
- 40: Hydraulic cylinder

Pressure & temperature ratings

Admissible service pressure [barg] for valve body made from EN materials

(calculated to EN12516-2)

Temperature [°C]	1.0460	1.5415	1.7383	1.4903
100	654	757	822	920
200	561	612	757	920
300	435	483	709	920
400	290	451	628	920
450	225	435	596	810
500		299	435	778
530		151	290	652
570			164	467
600			109	316
630				216
650				154

Admissible differential pressure Δ PMX:

	[barg]
Single stage	40
Three stages	300
Three stages with additional nozzle	370

Function

The ZK radial stage nozzle guarantees maximum wear resistance and ultra tight shut-off, combining the function of a control valve with a shut-off valve.

Each control valve is equipped with a ZK radial stage nozzle. This system consists of several sleeves nesting within one another, containing radial orifices drilled in them. By rotation of the sleeves, the orifices are shifted relative to one another, thus forming a large number of throttling points in parallel, with turbulence chambers (expansion chambers) in between.

The valve plug determines the flowrate through the ZK radial stage nozzle. Depending on its position, this valve plug opens up the individual orifices partially or completely, thus producing different flowrates.

As a result of this design, the pressure drop is reduced in steps and the medium flowing through is split up into many partial flows. This ensures high resistance to wear and reduces the noise level.

In addition the ZK 313 is provided with a dual shut-off system (tandem seat).

Function of the tandem seat

At the beginning of the opening process the valve plug first lifts off the main seat. The valve cone follows only after a certain lift of the valve plug. As a result, the flow velocities across the sealing surface are almost zero during the opening and closing process and, consequently, wire drawing is eliminated.

Spring to close:
Handwheel: yes/no
Positioner: yes/no

Inspection & Certification

Documentation regarding material tests and in-house examination with inspection certificate to EN 10204-3.1 or EN 10204-3.2 available at extra cost.

Please state the inspection and certification requirements when inquiring or ordering. After supply of the equipment certification cannot be established.

Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our price list "Test and Inspection Charges for Standard Equipment".

For other test certificates please consult us.

Supply in accordance with our general terms of business.

Capacity chart, hot water $t_s -5K$

If $p_2/p_1 > 0.5$ multiply the capacity value by the correction factor K taken from the backpressure chart.

Capacity chart for cold water
