ZK 29/20, 2"

#### Control Valve with ZK Radial Stage Nozzle®

**ZK 29 ASME Class 900** 

1", 2", 3", 4", 6"

#### Description

Control valve ZK 29 with ZK radial stage nozzle® designed for reducing high differential pressures in industrial installations and power plants and used as: Warm-up valve

Steam control valve

Feedwater control valve

- Injection-cooling valve
- Drain valve
- Continuous blowdown valve
- Leak-off valve

All internals are exchangeable. Leakage rating Class VI acc. to ANSI FCI 70-22003.

#### **Optional extras:**

- Connection for sealing fluid
- Adjustable lift stop in the closing direction
- Self-tightening stuffing box
- Sample valve (on request)

Special angle-type bodies are available for all equipment versions.

#### Types of actuators and operation

The following actuators are available:

- 01: Handwheel (retrofitting of an electric rotary actuator not possible)
- 02: Handwheel (standard, retrofitting of an electric rotary actuator - with insert bush form B1 to EN ISO 5210 - possible)
- 12: Electric rotary actuator (with threaded bush form A to EN ISO 5210)

#### Pressure & temperature ratings

#### Admissible service pressure [barg] for body made from ASME materials

(calculated to ASME B16.34, Class 900)

For higher pressure/temperature limits please contact the manufacturer.

Temperature [°C]	A182 F12	A217 WC6
20	155	155
200	138	143
300	128	128
400	109	109
500	64	77
550	36	38
593	20	20
595	19	-

- 13: Electric linear actuator
- 14: Electric rotary actuator
  - (with insert bush form B1 to EN ISO 5210)
- 20: Pneumatic diaphragm actuator 30: Lever actuator without part-turn actuator attached
- 31: Lever actuator equipped with guarter-turn actuator
- 40: Hydraulic cylinder

#### Admissible service pressure [psig] for body made from ASME materials

(calculated to ASME B16.34 Class 900)

#### Function

The ZK radial stage nozzle guarantees maximum wear resistance and ultra tight shut-off, combining the function of a control valve with a shut-off valve.

Each control valve is equipped with a ZK radial stage nozzle.

This system consists of several sleeves nesting within one another, containing radial orfices drilled in them. By rotation of the sleeves, the orifices are shifted relative to one another, thus forming a large number of throttling points in parallel, with turbulence chambers (expansion chambers) in between.

The valve plug determines the flowrate through the ZK radial stage nozzle. Depending on its position, this valve plug opens up the individual orifices partially or completely, thus producing different flowrates.

As a result of this design, the pressure drop is reduced in steps and the medium flowing through is split up into many partial flows. This ensures high resistance to wear and reduces the noise level.

#### Function of the control edge

On the valve plug, there is a control edge which is separate from the seat surface and which closes the orifices of the sleeve insert before the valve plug comes to rest completely against the seat ring. As a result, wear is prevented on the surface of the seat. Because of the multiple, step-by-step expansion in the turbulence chambers, the pressure drop in the region of the seat is minimized.

#### **Inspection & Certification**

Documentation regarding material tests and in-house examination with inspection certificate to EN 10204-3.1 or EN 10204-3.2 available at extra cost.

Please state the inspection and certification requirements when inquiring or ordering. After supply of the equipment certification cannot be established.

Charges and extent of the above mentioned certificates as well as the different tests confirmed therein are listed in our price list "Test and Inspection Charges for Standard Equipment".

For other test certificates please consult us.

Supply in accordance with our general terms of business.

#### Capacity chart for hot water ts -5K

If p2/p1 > 0.5 multiply the capacity value by the correction factor K taken from the backpressure chart.
